Our purpose is to save lives and minimize the impact of breast cancer.

What We Do

- Work to improve the practice of breast imaging and enhance the quality of breast imaging education
- Provide a medium for the exchange of ideas among those involved in the breast imaging field
- Provide expert opinions to lawmakers and government agencies on breast imaging issues
- Partner with emerging breast imaging societies outside the US to co-sponsor educational programs designed to improve knowledge and clinical care

The Society of Breast Imaging (SBI) was formed in April 1985. Its membership was initially only by invitation and limited to Fellows, selected based on their contributions to the field of breast imaging. In 1991, SBI established a more inclusive radiologist General Membership category. In 1995, SBI further expanded the General Membership to include not only board certified/eligible radiologists but also medical physicists, other scientists, technologists and other support personnel in breast imaging. General Members that meet specific qualifications may apply to be Fellows of the Society after five years of membership. In 2013, SBI initiated an International Membership for breast imaging radiologists outside of the US and Canada. In 2019, the Society launched the Journal of Breast Imaging, the first peer-reviewed journal to focus solely on breast imaging. SBI has over 3,500 members worldwide.

Core Values

- Patient-centered and Evidence-based Care
- Excellence in Education
- Scientific Integrity
- Collaboration and Collegiality
- Respect for Diversity and Inclusiveness
