Why should women begin annual screening mammography @ 40?

- Breast cancer occurrences increase with age
- 40% of the years of life lost to breast cancer is among women diagnosed in their 40s
- 3 out of 4 women who died from breast cancer didn’t have a regular screening mammogram
- Screening leads to the largest reduction in deaths
- The harms of screening are negligible compared to death
- Screening detects cancer while it is still curable
